Märklin NOHAB / Uhlenbrock 76 320

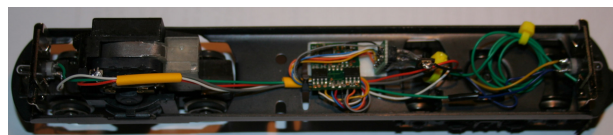

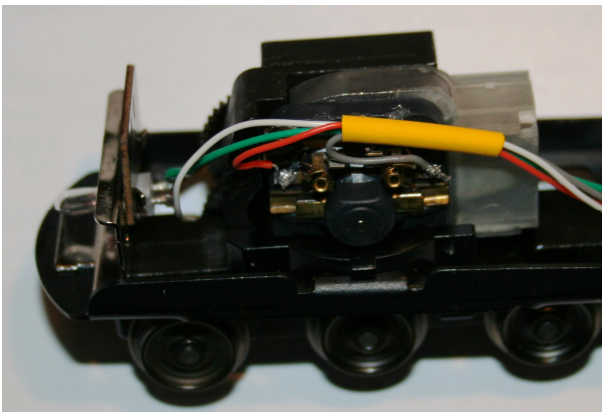

Märklin DSB MY 118 (The yellow locomotive) comes with a Delta module. This means you cannot control the headlights and the locomotive address can only be set on dip-switches removing the locomotive haul.

From factory, the locomotive looks like this:

Converted to digital with an ESU 51 962 Hamo field armature, an ESU 51 950 8-pole NEM 652 cable set in DCC definition colours and an Uhlenbrock 76 320 locomotive decoder, and it looks like this:

Please contact me if you have information to add on info@digitaltog.dk

I take no responsibility what so ever – this is a hobby project!
